

Airborne Operator Consoles

Airborne Operator Consoles

Do you fly demanding missions that require high focus for several hours, day or night?

We offer workplaces that are optimised for ergonomic position and for your mission specific tasks.

Choose between different displays and console configurations. Add electronic equipment as needed.

Two HD displays allow to better keep track of your mission as you can see and use two views simultaneously. E.g. have the camera view on one display and see the aircraft position and the field of view of the camera in the moving map. Or use the two displays for IR sensor and TV sensor.

Or choose our one display configuration with a screen size up to 23 inches.

Use touch input to control your mission management system, as all offered displays are touch displays.

Choose optional equipment like a video recorder or a retractable keyboard.

You need other devices like an USB port, a card reader, a radio or a control head? Our console has mounting provisions which allow integration of video recorders, other data storage devices or radios. And our optional interconnect box allows installation of small electronic devices within easy reach.

The console does not yet match your requirements? We adapt and customise our system for you.

CERTIFICATION

The console is compliant with the latest requirements of

▶ EASA CS27 / CS29

It is certified on:

▶ EC135, EC145, CH-53, BK117

Console with 2 x 15,4" Full HD MFDs

gooseneck lamp (LED, NVIS white or green, dimmable)

swivel mechanism for quickly adjusting display distance and view-point height for perfect user ergonomics

modular control-panel and inter-connect box (optional)

PTT switch (optional)

2 x 15,4" MFDs (Full HD, Touch, NVG Comp., LED Backlight, very ruggedized)

slide-in/out keyboard (optional, not shown)

quick release fittings for seat rail attachment

Console with 20" HD Widescreen MFD

ERGONOMIC OPTIMISATION

- ▶ With our two point swivel mechanism our consoles are adjusted to every operator within seconds – even during flight – and offer perfect viewing distance and viewing angle.
- ▶ Stretch your legs as there are no obstructions in the leg area.
- ▶ The positioning of the HD displays in the two-display-configuration is optimised to give you the best viewing angle in all positions.

FLEXIBILITY

- ▶ Are you flying at night? Displays and all elements of the console are NVIS compatible, including a NVIS reading light.
- ▶ Use your aircraft for other tasks too, as our consoles offer fast installation and removal times (less than 5 min) with quick release fittings.
- ▶ Our consoles are optimised for small cabin size. They need only 116 cm in height.
